**Quels ont été les points forts de votre expérience d'apprentissage dans cet enseignement ? / What were the strongest aspects of your learning experience in this course?**

- 1 A very simple way of explaining what seems to be very complex, and also taking the time to answer all the questions and doubts.
- 2 the TA covered the homework and course material with great detail
- 3 the strenghts is the TA itself, Viktor is one of the best. He did everything that he could do. Actually, he burnt himself and did his best to reach the maximum point of satisfaction.
- 4 The TA made a genuine effort to not leave anyone behind which I think is very laudable.
- 5 Professor very charismatic, responsive to any inquiry, and explains the coursework and exercises well. Help with sessions for exam revisions were great and helped a lot.
- 6 no
- 7 Great course.
- 8 good examples for us
- 9 Working on the assignments
- 10 Interactive sessions helped a lot, impeccable teaching.
- 11 A very kind ta.
- 12 Viktor, as a teaching assistant, helped make the seminar a perfect complement to the lectures of econometrics III. While being very supportive, he was able to explain and resolve any doubts we might have had after the main classes. In addition, seminars on Stata coding were beneficial, too, as we did not have any other classes outside econometrics that dedicated time for developing coding skills in this programming language.
- 13 The class discussions really helped deepen our understanding. Viktor was very approachable and non-judgemental so the students were comfortable asking questions. Such a positive environment helped us learn with and from each other. Viktor is an amazing TA!
- 14 great
- 15 Nice exchanges and understanding.
- 16 I think Viktor was super honest and forthcoming with how this course is not easy!! definitely made me feel better, since there was so much to learn. Having a TA that understands the workload was very helpful.
- 17 VETERINAROV was very dedicated to our learning experience and spent a lot of time making sure we understood the concepts and developed intuition about the material covered in the course

**Quels ont été les points forts de votre expérience d'apprentissage dans cet enseignement ? / What were the strongest aspects of your learning experience in this course?**

- |    |  |
|----|--|
| 18 | Le professeur a été très investi dans son cours, très à l'écoute de notre question et soucieux de nous fournir les meilleurs réponses dans le délais de temps imparti. |
| 19 | .  |

**Comment pourrait-on enrichir l'expérience d'apprentissage dans cet enseignement ? / How could the learning experience improve in this course?**

- |    |  |
|----|--|
| 1  | More empirical exercises   |
| 2  | the pace of discussing things in the session can be managed in a more timely way to ensure that most materials can be covered  |
| 3  | No comments because Viktor did everything. He will be a great economist in the future, I believe that.   |
| 4  | /  |
| 5  | Potential session dedicated to going over the main points of de Chaisemartin's course might be very helpful to lower the clutter from revision of 300+ pages per exam.   |
| 6  | no   |
| 7  | Try to finish the pssets.  |
| 8  | it is very good  |
| 9  | The learning experience was great.   |
| 10 | NA   |
| 11 | More exercises to practice with solutions.   |
| 12 | In some seminars, it was challenging to manage time well as students often had a lot of questions and doubts regarding class material. Thus, addressing this by structuring the seminar differently or providing more office hours might resolve this issue. |
| 13 | Viktor and his TA sessions are perfect.  |
| 14 | great  |
| 15 | Randomisation could be avoided.  |
| 16 | It would be good if there were some supplementary exercises provided, especially for the cross section part of the course since there aren't many problem sets on it   |
| 17 | Better alignment with the lectures - it was not always clear how the classes and assessments (problem sets) aligned with the material covered in the course  |
| 18 | Il serait intéressant si il y aurait une association directe entre les exercices et le cours. Et qu'on puisse distinguer facilement les éléments qui nous permettent d'identifier un cas du cours pour ensuite déterminer les méthodes à appliquer.          |
